## Enabling Quality Qualitative Data Analysis with Evidence through NVivo for Interdisciplinary Research (Part 2)

Workshop by Dr. Paula Hodgson  
(Professional Consultant, Centre for Learning Enhancement And Research,  
The Chinese University of Hong Kong)

### Abstract:

When analysing qualitative data, researchers can use an inductive or deductive approach to examining sources of data. Coding may allow you to formulate a framework or identify sources of evidence with respect to the approaches used. Categories emerge when individual coding is clustered into levels of sub-themes. To address research questions, researchers can further explore relationships between or within cases. The queries function in NVivo will allow researchers to compare cases with visual displaying related nodes, and retrieve matrix results with priority in table format easily. In addition, NVivo also offers an alternative approach to textual script analysis that provides fresh scope from the sea of data to provide an enlightened scope in addition to existing theories.

### About the Speaker:

Dr. Paula Hodgson has been working in higher education since 1997. Enthusiastic about innovative practices in learning, teaching and research, she worked in the Educational Development Centre of the Hong Kong Polytechnic University for almost ten years. Her work has involved a number of projects funded by Hong Kong's University Grants Committee, including Action Learning Project, Megaweb and e3Learning.

### Workshop Details:

Date: 15 May 2018 (Tuesday)

Time: 2:00pm-5:00pm

Venue: RLG 402, HKSYU Research Complex

Topic: Enabling Quality Qualitative Data Analysis with Evidence through NVivo for Interdisciplinary Research (Part 2)

***As seats are limited, registration is strongly recommended. All are welcome!***

*This workshop is supported by UGC/IDS 15/16*
